

## ABSTRACT OF THE DISCLOSURE

A digital video / audio broadcast device discloses a video / audio CD-ROM device that is able to directly read and broadcast video / audio data stored in a memory card. The digital video / audio broadcast device includes a memory slot on the video / audio CD-ROM device and a built-in video / audio broadcast program in the video / audio CD-ROM device to broadcast digital images or audio data in a memory card directly through the video / audio broadcast program and an interface operating program supplied by a digital video / audio decompressing card built-in the video / audio CD-ROM when a memory card with video / audio data, such as a compact flash card (CF card), is plugged in the video / audio CD-ROM device.
